Paint Services

Paint

Valor uses only Low VOC (volatile organic content) waterbase paint. We've selected paint specifically developed to provide superior adhesion to plastic substrates and hardness. Valor has applied this product since 2006 with excellent results.

Process

All products go through a multi-stage preparation process to ensure superior adhesion to the product.

Application

Valor utilizes the most advance HVLP guns for application of paint. Some colour pigments require multiple wet coats where each coat needs to fully flash off before the next coat can be applied. Some colours will be applied at a premium to cover any additional costs.

**Heat Reflective**

Darker colours will have a heat reflective additive to reduce surface temperatures intended to reduce warping and expansion.

Gloss Level

We select a MATTE finish which is approximately a 40% Gloss as our standard coating, as compared to what we would call a SEMI-Gloss which would be a 60% Gloss. Should you wish a SEMI-Gloss coating, please specify as this may result in extra charges.

Protection

All painted product is protected as required, with poly wrap, self-adhesive film, foam, or cardboard.

Paint Match

We can match any colour however due to match cost and the amount of paint required, we will charge a paint match fee.

Projects

Projects that will use greater than a gallon of paint will generally not have extra charges, however minimum charges will always apply.

Make the ULTIMATE First Impression in your neighbourhood!
